## Profile

I am a highly passionate Food technologist with a wide range of experience gained from working internationally in various industries. During my career I became skilled in Engineering, Sales Management, Business Development and Technical Management, and adopted an expert opinion in Dairy, Processed Food Technology, Automated Cleaning Systems and CIP techniques. Being strategic, creative, empathic, agile, resourceful, committed, I am a no nonsense solution driven manager. I am eager to share knowledge through discussions, training, lecturing and publications for a multicultural international environment.

---

Hygienic design has intrigued me from the moment I started my first job at Alfa-Laval. This fascination never changed throughout my career. Early in my career I got familiar with EHEDG, for me and many others in the industry a leading source of hygienic design and engineering expertise. I source that I wanted to and became part of. And over the years my passion to be able to contribute to the EHEDG network only grew stronger.

Being trained by two excellent EHEDG trainers at Campden, in 2006, I was able to actively participate as a member in several Working Groups. Later I chaired the Working Group Cleaning In Place (CIP). Currently I am the chair of the Regional Section Belgium and I am also active in the Subcommittee Regional Development liaison for Belgium, France, the Netherlands, the United Kingdom & Ireland and for South Africa. After a 6 year participation the Advisory Board, I am today chair the Subcommittee Product Portfolio and as such I am also part of EHEDG's Executive Committee.

Over the years in EHEDG I have become befriended on a personal basis with a lot of colleagues in the EHEDG community, which is first and foremost is great from a social point of view, but which also lead to bringing me many insights, as well as clarity on the needs and wishes on food safety within our EHEDG network and the industry as a whole.

I am very motivated to fulfil the vacant role of EHEDG President and drive this organization on our continued path towards a global authority, on hygienic design and engineering. This with strong support of Diversey as one of the global leaders in hygiene solutions for the F&B end consumers. I hope I have gained your trust over the years as well and that you will therefore be able to count on your vote.

Yours sincerely and with warm regards,

Hein Timmerman
