

Authorised Trainer

Allan Navarro Carvajal

Allan Navarro is a Chemical Engineer with more than 22 years of experience in the food industry, including 19 years with ECOLAB's Food & Beverage division. His career has been dedicated to supporting food and beverage manufacturers in strengthening cleaning, sanitation, and food safety programs across multiple sectors, including dairy, beverages, juices, canned products, protein processing, and other food manufacturing operations.

Throughout his professional journey, Allan has developed strong expertise in hygienic design and its practical application as a key enabler of effective cleaning, microbiological control, operational efficiency, and food safety assurance. He has participated in numerous technical audits focused on product quality, microbial performance, and the effectiveness of cleaning programs, including CIP, OPC, and ACS applications. In these engagements, he has consistently emphasized the importance of hygienic design from the early stages of facility construction through the detailed design, selection, installation, and validation of processing equipment.

In his current role as an Industrial Technical Consultant at Ecolab, Allan provides technical guidance and field-based support to help food and beverage operations improve cleanability, reduce contamination risks, enhance sanitation efficiency, and build more robust food safety systems. His work reflects a strong commitment to promoting hygienic design principles as a practical and necessary foundation for safer, more reliable, and more sustainable food production. Through his technical experience, training activities, and consulting work across Latin America, Allan aims to contribute to the broader dissemination of hygienic engineering knowledge and best practices aligned with EHEDG's mission.
