

Yoshiharu Shimizu

Mr. Shimizu develops equipment used in food production plants and engineering food plants.

He has worked for many years in companies with many experience in food production systems and equipment in Japan and Asia.

In addition, he experienced the engineering rig of the food plant based on the technique of pasteurization and sterilization of the food that he learned, and developed and designed the plant cleaning and control system.

So he acquired and experienced a wide range of technologies and knowledge from equipment hygiene to food manufacturing technology.

In addition, he aimed at improving the quality of its activities, he was also involved in the introduction of ISO quality management system, and also gained experience on quality assurance other than technology on the hygiene aspects of machinery.

Based on his extensive experience over many years, he has been managing the research and development department and engineering department, and is striving to improve the hygiene of food manufacturing plants.
