

Authorised Trainer

# Enrico Visconti

Enrico is an experienced senior corporate manager in the field of process and conveyor belting, hygienic industrial components, and inline cleaning equipment for open processes.

He has extensive international background in both the food processing industry and the machine components design and manufacturing at Habasit International AG, where he has held corporate managerial positions in the following roles, including product management, application engineering, product development, project management, and business development.

He holds a university degree in business and economics.

Enrico has got over thirty years of experience in industrial engineering-related disciplines and along the way, he developed innovative products for the food processing industry with a specific focus on food safety and efficient resource utilisation. He holds several patents as an inventor.

In 2021 and 2022, one of his innovative and hygienically designed products won three technical awards: the “International FoodTec award” of DLG in Germany, and the “Food Processing - Hygiene & Food Safety award” in the UK and Poland from the national food engineering associations.

His main activities include new product solutions ideation and development, consultancy on industrial components’ application and system design issues. Enrico is also an experienced international trainer in conveyor engineering, food hygiene, and hygienic design for the food processing industry all over the world.

At EHEDG he is the Co-Chair of the “Conveyor Systems” Working Group and an Authorised Trainer.
